## **DETAILED ACTION**

### ***Priority***

No priority has been claimed for this patent.

### ***Information Disclosure Statement***

There was no Information Disclosure Statement filed with this application.

### ***Specification***

The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention is not indicative of what the main improvement is to the already existing inventions. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Blood Collection Assembly with a Stopper that prevents Blood Dispersion.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Rilliet (US Patent # 4,434,802).

Regarding claim 1, Rilliet shows a tube for collecting blood with a vacuum method that comprises a stopper and a collection needle in Figure 1. It is noted that a "piercing point" is any point on the stopper that can be penetrated by the needle to access the main tubular body for depositing blood. Regarding the annular lip in claim 1, the lip can be seen in Figure 3 as reference numbers 25b and 25a, which form a groove that surrounds the piercing point of the needle in the stopper.

Regarding Claim 2, it can also be seen in Figure 3 that the lip protrudes inward from the outer edge of the stopper's external cavity to form an annular groove around the piercing point. The groove is formed around the internal cavity(23) in Figure 3.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Pat. No. 6,602,206 Niermann et al. discloses a Stopper-Shield Assembly.
